

TRAMReports

TRAMReports

TRAMReports™ is an adaptable data management and reporting tool offering power, performance and native (ODBC) connectivity to most popular database engines; Oracle, MS SQL, MS Access and more. It can extract records from multiple tables within different databases.

TRAMReports™ generates automatic SQL select statements eliminating the need for programming, making it an ideal component for Rapid Application Development efforts.

Integrate and Use TRAMReports™ Creatively

- Pull complex ad-hoc reports on the fly.
- Save on design and development efforts.
- Track/audit the financial or transaction data by selecting certain records to confirm the validity of the data that has been previously provided in other reports.

DATA MANAGEMENT

TRAMReports™ facilitates efforts in design, inspection and normalization of your database(s).

It can quickly identify how transaction or financial information is handled within current operations.

Eliminate Problems and Create Opportunities!

Today many companies have invested a wealth of resources in enterprise systems. However, it is not uncommon to discover that the complexity of today's platforms at times impede efficiency and may not meet all of the anticipated data outputs.

TRAMReports™ promotes increased data management efficiency.

Companies need to maintain and proliferate the life of the invested product/services, in order to encapsulate the ultimate goal, which is managing data to insure proper insight on past, current and future decisions.

Sales	Service Calls	Statistics
Inventory	Operations	Analysis
Revenue	Forecasting	Tracking

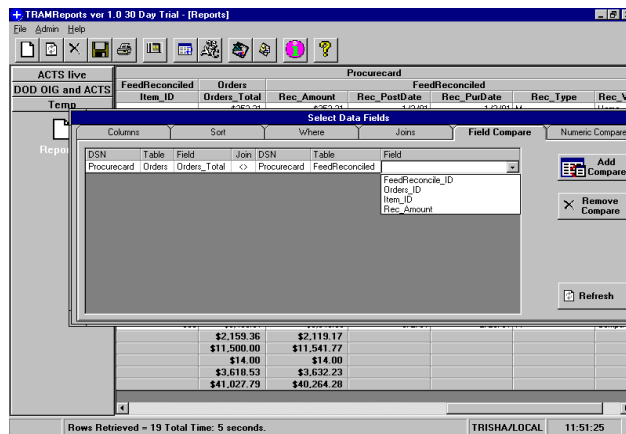

TRAMReports™ can be the glue to help you bring all of the pieces together!

TRAMReports™ is Flexible:

- Connects with Ease
- Retrieves DISTINCT record sets in real time.
- YGWYAF (You get what you ask for) with TRAMReports™!
- Export reports to .txt, .csv or Excel formats.
- Simulates the relationships within the data source(s) by using a powerful SQL engine.
- Process Joins, insert multiple criteria requests, simulates relations, enables field and numeric comparisons.
- Performs various calculations, sums, averages, minimum/maximum values, standard deviations, subtotals and record counts.
- User Friendly- Point and click to any available data items.
- Create, copy and reuse templates.
- Sort to any level.
- Easily adjusts to data structure changes by using the DSN Management Screen.
- Create joins between relational and non-relational data sources and retrieve all selected data into one report!

TRAMReports™ is flexible to meet your business needs:

Create alerts and determine recipients for each assigned business unit. Designate individuals to review the reports that are missing key data elements within the provided record sets that are required to keep production streamlined. *For example:* Flag disputes, flag the number of service calls generated along with costs or transactions that have exceeded the credit limit amount.)

TRAMReports™ can be configured to accommodate other data sources and/or customized to fit your specific needs.

A fat client of TRAMReports™ is also available, enabling web users the convenience of a high performance ad-hoc report generator.
