ITG Release of new Email Parser website: www.emailparser.net

Falls Church, VA – June 17, 2013 - Integration Technologies Group, Inc. has released its newest version of ITG’s Email Parser website, www.emailparser.net. The website will serve as ITG’s web presence for the ITG Email Parser, an internet based software solution for parsing email messages and automating email processes.

The website release includes an updated layout, product features, applications, and a tour of the software interface. The addition of these features demonstrates a new focus on customized solutions that are being offered by ITG.

“We recognize the need to offer a customizable solution that addresses the unique requirements of an enterprise level business.” says Software Engineer, Pouria Javaheri. “To address this market, the option to have ITG create a tailored email parsing solution is now highlighted on the website.”

Additions to the ITG Email Parser website focus on ITG’s ability to resolve and react to changes, essential to stay competitive in today’s e-commerce driven marketplace. “ITG’s vision is to provide a website which informs visitors of the options, features, and customizable schemes available for an enterprise level solution.” says Dustin Asbury and Jason Kellogg, who are responsible for content selection, design and e-marketing development.
