ITG Announces the 2.0 Release of www.isoconsultingsolutions.com

FALLS CHURCH, VA – February 1, 2013 – ITG a provider of ISO 9001, ISO 20000, ISO 27001 and CMMI consulting services recently released a new version of www.isoconsultingsolutions.com with the intent of adding additional content for people interested in learning more about process improvement.

"The latest version of the website is intended to provide informative content for individuals who are just getting started with their process improvement exploration" says Vice President, Markus Darby. "We continue to find that small businesses want a place to find information that is easy to navigate, provides information on how to get started, and provides resources that can be reused."

ITG works with companies to help them obtain globally recognized certifications and appraisals such as ISO 20000 and CMMI for Development. "Companies are increasingly turning to trusted websites to provide accurate and concise information about specific topics, part of our strategy is to continue to enrich the content on our site based on our customers and visitors feedback" said ITG CEO Michael Angelakis. "Looking to the future this is an intermediate step to becoming a full service provider of quality, security, service management and performance improvement content. The first step was to update the layout and presentation so that we can continue to add interactive content and information that is relevant to those that operate in the performance improvement space."

The new website includes overviews of industry standards, commentary on the benefits typically received by employees at different levels within a certified company, the ability to sign up for newsletters and upcoming on premise and online events, and presentations on typical topics of interest. "We want to create a web presence that matches our corporate personality" says Darby "ITG has always been about ensuring the success of our clients, partners and associates. We hope that in some small way our revamped website will help provide value in the typically complicated arena of process improvement."
