

Quality Assurance Analyst

Provide technical and administrative direction for personnel performing software development tasks, including the review of work products for correctness, adherence to the design concept and to user standards, review of program documentation to assure government standards/requirements are adhered to, and for progress in accordance with schedules. Coordinate with the Project Manager and/or Quality Assurance Manager to ensure that problems are solved to the user's satisfaction. Make recommendations, if needed, for approval of major systems installations.

Three (3) years of increasing responsibility providing technical and administrative direction for a team of Software Engineers in applying quality control/quality assurance management procedures, including implementing a program of reporting, tracking and analyzing key metrics, reviewing work products, adherence to the design concept and user standards, monitoring quality procedures and participating in software reviews and testing, and reviewing program documentation to ensure compliance with government standards/requirements. Demonstrates ability to work independently based on the strategic plan or under general direction. Must be able to effectively employ contemporary project management tools.

Bachelor's degree in Computer Science, Information Systems, Engineering, Math, Business or other related scientific or technical discipline.
